Description: This Standard Reference Material (SRM) is a gravimetrically prepared single-compound solution (methylene chloride) in methanol intended primarily for the calibration of instrumentation and validation of methods for volatile organic compound (VOC) determinations. Because of its miscibility with water, this SRM can also be used to fortify aqueous samples with known amounts of the VOC. A unit of SRM 3008 consists of two 5 mL sealed borosilicate glass ampoules of a gravimetrically prepared solution of methylene chloride in methanol. Approximately 2.5 mL of this SRM mixture is supplied in each 5 mL glass ampoule.

Substance: Methylene chloride in methanol.

Other Designations:

Methanol (methyl alcohol; methyl hydroxide; wood alcohol; wood spirit)
Methylene chloride (dichloromethane; methylene dichloride; methane dichloride; DCM)

2. HAZARDS IDENTIFICATION

NFPA Ratings (Scale 0–4): Health = 2 Fire = 3 Reactivity = 0

NOTE: This methylene chloride in methanol solution has not been tested as a whole. The health and physical hazard information are for the individual components, methylene chloride and methanol. The actual effects of the solution may differ from the individual components.

Major Health Hazards: Skin, eye, and/or respiratory tract irritation, central nervous system depression, blood disorders, liver damage, aspiration hazard, and nerve damage. Methylene chloride is a known cancer hazard (in humans).

Physical Hazards: Flammable liquid and vapor. Vapor may cause flash fire. Electrostatic charges may be generated by flow or agitation.

Potential Health Effects (Acute and Chronic)

Inhalation: Methanol may cause irritation, cough, ringing in the ears, constipation, headache, drowsiness, dizziness, tingling sensation, pain in extremities, tremors, loss of coordination, blood disorders, and nerve damage. Methylene chloride can cause irritation, vomiting, chest pain, irregular heartbeat, headache, drowsiness, dizziness, disorientation, tingling, numbness of the extremities, a sensation of heat, drunkenness, stupor, dullness and mental confusion. Long term exposure of methylene chloride may result in cancer.

Skin Contact: Methanol can cause irritation, absorption may occur, headache, drowsiness, dizziness, loss of coordination, and blood disorders. Methylene chloride can cause irritation to the skin (possibly severe); skin absorption may occur causing effects detailed in inhalation. Prolonged or repeated contact may cause dermatitis.

Eye Contact: Methanol and methylene chloride vapors may cause irritation and eye damage. Repeated or prolonged contact may cause conjunctivitis.

Ingestion: Ingestion of methanol may result in mild and transient inebriation and subsequent drowsiness. Liver, kidney, heart, stomach, intestine and pancreatic damage may also occur. Death may occur due to respiratory failure. As little as 15 mL has caused blindness; the usual fatal dose is 60 mL to 240 mL. Methylene chloride can cause nausea, vomiting, diarrhea, stomach pain, convulsions, unconsciousness, irregular respiration, central nervous system depression, and convulsions.
